

ENHANCED SAFETY KIT FOR OFFSHORE CAPSULES

SURVIVAL
SYSTEMS
INTERNATIONAL

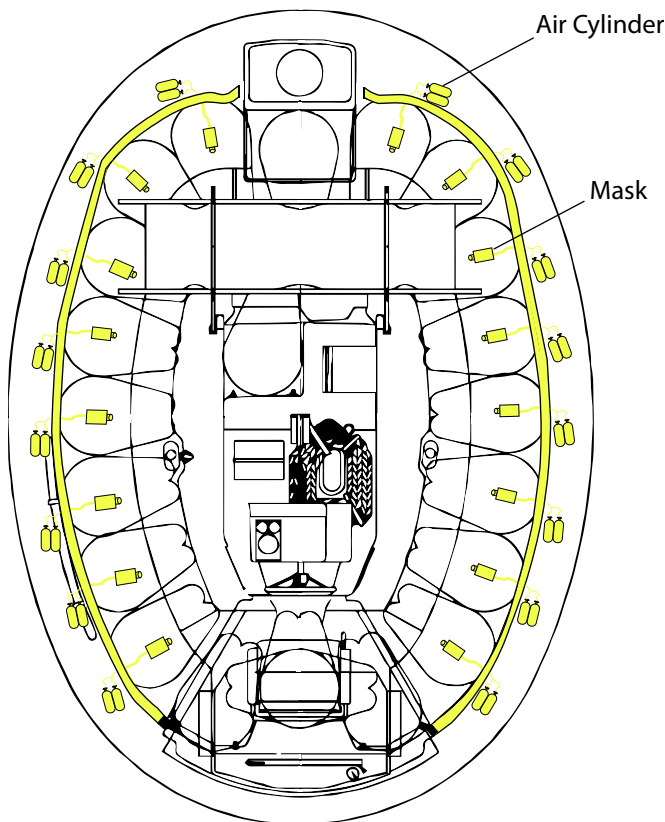

ADDED FEATURES - DESIGNED FOR YOUR CAPSULE - OEM CERTIFIED COMPONENTS - INSTALLED ONSITE - ADDED SAFETY

H2S MONITORING AND BREATHABLE AIR SYSTEM KIT

MODELS: Currently available for all SSI Capsules.

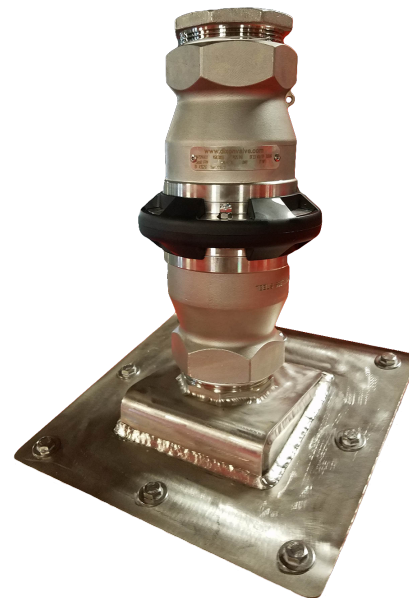

SAFETY BENEFITS: For those in H2S prone areas, our H2S monitoring and breathable air system kit offers a top of the line solution. This kit ensures the safety of each member of you crew by providing them with individual masks and air cylinders at their seats. During the actual launch of the capsule there is a designed break-away hose coupling that will disconnect the air supply from the platform. Additionally, a detection device will indicate when toxins may be present in the air and alert you to their presence. Once detected the blower unit will take all the low lying air in the engine compartment and expel it out the capsule.

CAPSULE INTERIOR

Components Include:

- Individual emergency breathing apparatus systems
- Break-away hose coupling
- Detection Device
- Blower Unit

BREAK-AWAY HOSE COUPLING

WHAT ARE ESK's?

ESK's are SSI's engineered packages of additional components (or modified components) to "add-on" to your existing SSI offshore capsule, winch and/or platform. The goal of these kits is to offer additional functionality, ease of operation and ultimately added safety to your Survival Systems International equipment. Since SSI is the OEM of your equipment, as well as the designer and manufacturer of these Enhanced Safety Kits, the installation process is seamless and cost effective.
